INTERNAL ECONOMICS ANALYSIS — BUC-EE'S

FORM ECN-001 · 04/30/2026

CONFIDENTIAL — INTERNAL PRICING & COST FRAMEWORK · NOT FOR EXTERNAL DISTRIBUTION

Status: PROPOSAL · v0.1 — 2026-04-30 **Owner:** Ben (strategic read) · Rene (finance read) · Claude Code (drafting) **Trigger:** Charmaine Davis (Buc-ee's category buyer) reply 2026-04-30 — declined the $3.25/7.5oz wholesale offer ("$0.43/oz vs ~$0.19/oz commodity gummi bears at H-E-B"). Asked: "*are you interested in private labeling or only in the USA Gummies brand?*" **Companion to:** `/contracts/proforma-channel-margins.md` (per-channel GM framework, COGS = $1.77/bag locked) · `/contracts/wholesale-pricing.md` v2.2 · `/contracts/proposals/pricing-grid-v2.3-route-reconciliation.md` **Decision required from Ben (Class B `wholesale.proposal_response`):** which response option to stage for Charmaine — Option 1 (premium-positioning re-pitch), Option 2 (private-label scoping reply), Option 3 (parallel pursuit), or Option 4 (close with future-reach-back).

> **Why a doc, not a one-shot reply:** Charmaine's pushback is the first major-retailer "your math doesn't work for our shelf" we've had to answer. The economics need to be on paper before anyone replies. The doc also corrects a factual error in the regulatory pivot angle Ben sketched in Slack — see §3.

0. EXECUTIVE SUMMARY (BEN + RENE 2-MIN READ)

1. **Charmaine is right on the math.** $3.25 / 7.5 oz = $0.43/oz. Albanese 18oz at H-E-B = ~$0.19/oz. We are 126% per-ounce more expensive than the commodity bulk-shelf benchmark. **We do not win on a $/oz comparison.**
2. **We don't have to.** Buc-ee's already stocks premium impulse candy at $4.99–$6.99 retail (e.g. their own bagged Beaver Nuggets at $4.99, Sour Brite Crawlers in branded clip at ~$4.99). The right question is whether USA Gummies fits the **premium impulse strip-clip / branded mailer SKU slot**, not the bulk-bin commodity slot. Charmaine appears to have evaluated us as commodity. The pivot is to re-frame the SKU position.
3. **The regulatory tailwind is REAL but Ben's Slack sketch had the wrong bill numbers.** Texas SB 25 (signed 2025, effective Jan 1, 2027) **does not ban Red 40, Yellow 5, etc — it requires a WARNING LABEL** on packaged foods sold in Texas containing 44 specific dyes/additives, with $50K/product/day fines. **For a Texas-HQ retailer like Buc-ee's, every Albanese / Haribo / Sour Patch SKU on their shelves needs a warning label by 2027. Our dye-free product does not.** This is a defensible, factually accurate angle. CA AB 418 (Red 3 + 3 others, statewide) and CA AB 2316 (6 dyes in CA SCHOOLS only, effective end of 2027) are the related California bills — neither bans Red 40 statewide in CA. **§3 has the verified facts; do NOT use Ben's original framing in any customer copy.**
4. **Private-label is technically possible but economically thin until we know Buc-ee's volume.** ~50 stores × N facings × velocity is the missing input. We can give Charmaine a scoping framework, not a quote. §5 shows what we'd need to commit a custom run.
5. **Recommendation: Option 3 (parallel pursuit)** — re-pitch the branded SKU at premium-impulse positioning AND open a private-label scoping conversation. Don't kill either path until Charmaine signals which one she actually wants to pursue.

1. THE PRICING MATH COMPARISON (CHARMAINE'S FRAME VS OURS)

REFERENCE	$/OZ	$/BAG (7.5OZ EQUIV)	NOTES
H-E-B Albanese 18oz commodity tub	~$0.19	$1.43	Charmaine's benchmark. Bulk-shelf commodity. Commercial dyes (Red 40, Yellow 5, etc).
H-E-B "Hill Country Fare" private label	~$0.13–0.17	$0.98–$1.28	[needs HEB store-shelf check] House brand, deepest commodity tier.
USA Gummies wholesale (B5/pallet)	**$0.40**	**$3.00**	Pallet quantity, buyer-pays freight per `wholesale-pricing.md` v2.2 §2.
USA Gummies wholesale (B4 master carton landed)	**$0.40**	**$3.00**	36-bag MC landed cost.
USA Gummies wholesale (B3 master carton buyer-pays)	**$0.43**	**$3.25**	What Charmaine quoted.
Buc-ee's own bagged candy retail (Beaver Nuggets ~5oz)	~$1.00	n/a	$4.99 retail. House SKU.
Sour Patch Kids 8oz at Buc-ee's	~$0.50	$3.75	$3.99 retail [needs Buc-ee's shelf-check]. Premium dyes.

The honest read: if Buc-ee's evaluates us against Albanese 18oz tubs, we lose 100% of the time. If Buc-ee's evaluates us against Sour Patch Kids 8oz at $3.99 retail, we're competitive — and we have the dye-free regulatory tailwind they don't.

The pivot Charmaine needs to see: "We're not a commodity-shelf gummi bear. We're a premium impulse SKU. Our retail comp is Sour Patch Kids 8oz at $3.99–$4.99 retail, not Albanese 18oz at $3.50."

---

2. PER-SCALE LANDED COST (WHAT WE KNOW VS WHAT WE NEED)

All numbers below assume operating COGS = **$1.77/bag** (LOCKED 2026-04-29 per `/CLAUDE.md` and `wholesale-pricing.md` §1).

2.1 Master carton (36 bags, 21.125 lb packed)

LINE	PER MASTER CARTON	PER BAG	NOTES
Operating COGS (36 × $1.77)	$63.72	$1.77	LOCKED
Outbound freight (Ashford WA → Buc-ee's TX DC)	`[needs UPS/freight quote]`	TBD	Single MC = parcel; 1+ pallet = LTL. Drayage cost matters at scale.
Pick + pack labor (Ben, 1 carton)	~$2.00	$0.06	[estimated — Ben self-pack rate not in QBO yet]
Cost basis at MC	**~$65.72 + freight**	**~$1.83 + freight/36**	
Wholesale price (B3 buyer-pays)	**$117.00**	**$3.25**	Per `wholesale-pricing.md` §2
Gross margin per MC	**~$51.28 less freight**	**~$1.42 less freight/36**	~44% GM at MC scale before freight

2.2 Single pallet (12 master cartons = 432 bags, ~256 lb)

LINE	PER PALLET	PER BAG	NOTES
Operating COGS (432 × $1.77)	$764.64	$1.77	LOCKED
Outbound LTL freight Ashford → TX	`[needs LTL quote — 256 lb, 48"×40"×60" pallet]`	TBD	Estimated $400–$700 single pallet to TX DC zone [needs ShipStation quote]
Pallet wrap + dunnage	~$8	$0.02	[source: Uline pallet wrap S-7240]
Cost basis at pallet	**~$772.64 + freight**	**~$1.79 + freight/432**	
Wholesale price (B5 buyer-pays $3.00)	**$1,296.00**	**$3.00**	Per `wholesale-pricing.md` §2
Wholesale price (C-ANCH landed $3.00 — proposed v2.3)	**$1,296.00**	**$3.00**	Per `pricing-route-governance.md` §1; landed price requires us to absorb freight
Gross margin (B5 buyer-pays)	**~$523.36**	**~$1.21**	~40% GM, freight is buyer's problem
Gross margin (C-ANCH landed, $500 freight)	**~$23.36**	**~$0.05**	**~2% GM — landed pricing at single-pallet scale is loss-leading territory**

2.3 Three-pallet (1,296 bags) — first scale point where landed makes sense

LINE	PER SHIPMENT	PER BAG	NOTES
Operating COGS (1,296 × $1.77)	$2,293.92	$1.77	LOCKED
Outbound LTL freight (3 pallets)	`[needs LTL quote — ~770 lb, 3 pallets to TX]`	TBD	Estimated $700–$1,100 [needs ShipStation/freight broker quote at 3-pallet density]
Cost basis	**~$2,393.92 + freight**	**~$1.85 + freight/1,296**	
Wholesale at $3.00 landed	**$3,888.00**	**$3.00**	C-ANCH route-anchor pricing
Gross margin (3 pallets, $900 freight)	**~$594.08**	**~$0.46**	~15% GM landed

2.4 Truckload (24 pallets = 10,368 bags) — the volume that makes Buc-ee's interesting

LINE	PER TRUCKLOAD	PER BAG	NOTES
Operating COGS (10,368 × $1.77)	$18,351.36	$1.77	LOCKED
Outbound full truckload Ashford → TX DC	`[needs FTL broker quote]`	TBD	Estimated $3,500–$5,500 dry van WA→TX [needs broker quote]
Cost basis	**~$22,851 to ~$23,851**	**~$2.20–$2.30**	
Wholesale at $3.00 landed	**$31,104**	**$3.00**	

LINE	PER TRUCKLOAD	PER BAG	NOTES
Wholesale at $2.85 landed (volume)	**$29,549**	**$2.85**	Hypothetical FTL-tier — needs Class C `pricing.change` if we go below $3.00
Gross margin (FTL at $3.00, $4,500 freight)	**~$8,253**	**~$0.80**	~27% GM at truckload

2.5 What we do NOT have and would need before quoting at scale

The cost lines flagged `[needs ...]` above are real holes. To give Buc-ee's a serious quote at any scale beyond a single master carton, we need:

- **Powers tier pricing at higher volumes.** Current $1.52/bag manufacturing is a placeholder — final invoices haven't landed (per `/CLAUDE.md` "Inventory & COGS Model"). At a 50K-bag commit, we should be able to negotiate Powers down. **Ben action (direct to Greg Kroetch):** tiered pricing at 25K / 50K / 100K commits. *Drew not in the loop — he isn't operationally active yet.*
- **LTL + FTL freight quotes Ashford WA → Texas DC zones** (Houston, Dallas, San Antonio — Buc-ee's main DC nodes). **Ben action:** ShipStation/freight-broker quote pulls at 1, 3, 6, 12, 24-pallet density. Without these, landed pricing is a guess.
- **Buc-ee's payment terms.** Major retailers typically demand Net 60 or Net 90. Our current standing is Net 15 first-order, Net 30 thereafter (per `wholesale-pricing.md`). At Buc-ee's scale, Net 60 turns into a working-capital line item — `~$X tied up at any time` math needs to go in the proforma before agreeing.
- **Buc-ee's chargebacks + slotting fees.** Major-retailer SOP. We have zero data on what Buc-ee's specifically demands. **Ben action:** ask Charmaine directly when re-engaging.
- **Belmark custom-film plate quote** (only relevant if private-label path advances) — at 25K, 50K, 100K bag commits. **Ben action (direct to Belmark Link rep)**, not Drew.

---

3. REGULATORY TAILWIND — VERIFIED FACTS (CORRECTS BEN'S SLACK SKETCH)

> **CRITICAL CORRECTION:** Ben's pushback message in `#wholesale` 2026-04-30 09:56 PT mentioned "CA AB 418 already bans Red 40 / Yellow 5 / Blue 1 / Blue 2." **This is factually wrong** and would be a Spottswood-pattern leak risk if used verbatim with Charmaine. The actual bills are below. Verified via WebSearch 2026-04-30.

3.1 California — what's actually banned, when

BILL	EFFECTIVE	SCOPE	DYES/ADDITIVES BANNED
CA AB 418	Jan 1, 2027	**Statewide** (all foods sold in CA)	Red 3, brominated vegetable oil, potassium bromate, propylparaben
CA AB 2316	Dec 31, 2027	**CA SCHOOL FOODS only** (not statewide retail)	Blue 1, Blue 2, Green 3, Red 40, Yellow 5, Yellow 6

The honest framing: CA does not yet ban Red 40 / Yellow 5 / Blue 1 / Blue 2 statewide. AB 2316 only restricts them from being served in CA public schools (breakfast, lunch, competitive foods during school hours). Albanese / Haribo can still sell those dyes in California retail.

3.2 Texas — the bill that actually matters for Buc-ee's

Texas SB 25 (NOT SB 1545 — Ben had the wrong number). Signed by Governor Abbott 2025. **Effective January 1, 2027.**

- Applies to packaged foods + beverages sold in Texas containing any of 44 specific dyes/additives, including Red 40, Yellow 5, Yellow 6, Blue 1, Blue 2, Green 3, titanium dioxide, partially hydrogenated oils, olestra, bleached flour, and 33 others.
- **Does NOT ban these ingredients** — requires a warning label that reads (per published bill text): "WARNING: This product contains an ingredient that is not recommended for human consumption by the appropriate authority in Australia, Canada, the European Union, or the United Kingdom."
- **Penalty:** up to $50,000 per product per day plus state legal costs.

Why this is the angle for Buc-ee's specifically:

- Buc-ee's HQ is Texas. Most stores are in Texas. SB 25 applies to every shelf in their flagship state.
- By Jan 1, 2027 (≈8 months from a typical category-buyer planning horizon), **every commercial gummy bear with Red 40/Yellow 5 on Buc-ee's Texas shelves needs a warning label** comparing the product to ingredients flagged by Australia, Canada, EU, UK regulators.
- USA Gummies is already dye-free → zero warning label, zero packaging revision, zero $50K/day exposure.
- This is a real, defensible, factually accurate competitive angle. It is **not** a "the dye is banned" claim — it is a "your incumbent suppliers are going to need an unflattering warning sticker on their package in your home state" claim.

3.3 Federal context (worth one line)

HHS + FDA announced in 2025 they would phase out petroleum-based synthetic dyes from the food supply (timeline soft). State-by-state action is moving faster than federal. The directional momentum is clear: dye-using brands face an expanding compliance overhead curve; dye-free brands don't.

---

4. PREMIUM-IMPULSE SKU POSITIONING (THE RE-PITCH)

The pivot for Charmaine is from "commodity gummi bear" to "premium impulse candy." The closest category neighbor is **Sour Patch Kids 8oz at $3.99–$4.99 retail** — same shelf real estate, same impulse-purchase motion, same eye-level placement.

4.1 Comp-shelf framing

BRAND	PACK	RETAIL (BUC-EE'S TYPICAL)	$/OZ	DYES	MADE-IN-USA?	TX SB 25 WARNING NEEDED (2027)?
Albanese 18oz tub	18 oz	$3.50	$0.19	Red 40, Yellow 5, Blue 1	Yes (IN)	YES
Sour Patch Kids 8oz	8 oz	$3.99	$0.50	Red 40, Yellow 5, Blue 1, Yellow 6	Yes	YES
Haribo Goldbears 8oz	8 oz	$3.99	$0.50	Red 40, Yellow 5, Blue 1	Some (NC)	YES
USA Gummies 7.5oz	**7.5 oz**	**$5.99 MSRP**	**$0.80**	**None (dye-free)**	**Yes (Spokane WA)**	**NO**

We are 60% per-oz over Sour Patch retail. **But we are the only SKU on that shelf without an upcoming warning label in the retailer's home state.**

4.2 The retail-margin math at $5.99 MSRP

If Buc-ee's targets 35% retail margin on impulse candy:

- Wholesale ceiling at $5.99 retail × (1 − 0.35) = **$3.89 wholesale per bag**.

- Our B3 buyer-pays at $3.25/bag = **45.7% retail margin for Buc-ee's** at $5.99 — *better than their 35% target.*
- Even our C-ANCH landed at $3.00/bag (proposed v2.3) = **50% retail margin for Buc-ee's** at $5.99.

This is the math Charmaine probably didn't run. The $0.43/oz number is alarming if you're shelving us next to a $0.19/oz tub. The 45.7% margin is attractive if you're shelving us next to a $4.99 Sour Patch Kids. Same wholesale price; different framing.

---

5. PRIVATE-LABEL SCOPING (CHARMAINE'S ACTUAL QUESTION)

Charmaine asked: "*are you interested in private labeling or only in the USA Gummies brand?*"

Honest answer: we are open to it, but the economics break down differently than Charmaine probably expects, because our COGS is dominated by per-bag manufacturing — not by labeling. A private-label run does not lower COGS meaningfully unless Powers gives us a volume break.

5.1 What changes under private label

LAYER	USA GUMMIES BRAND	PRIVATE LABEL (BUC-EE'S BRAND)	DELTA
Powers manufacturing	$1.52/bag	$1.52/bag (same gummy)	$0 — unless Powers offers volume break
Belmark primary film	Existing branded SKU	**Custom film + plates one-time charge**	`[needs Belmark quote]` — typical $3K–$8K plate setup + per-roll cost similar
UPC	Existing GS1 prefix	**Buc-ee's provides their own UPC**	$0 to us
Custom artwork	Existing	**Custom design** — we can do, or Buc-ee's design team provides	$0–$2K depending on who designs
Uline secondary	$0.25/bag	$0.25/bag (same MC + cases)	$0
Co-pack run at Powers	Existing schedule	**New SKU = new co-pack run, MOQ likely 25K+ bags**	Capital + lead time
Operating COGS at scale	**$1.77**	**~$1.77 + setup amortization**	**Nominal — probably +$0.05–$0.15/bag depending on commit volume**

5.2 Why private label is NOT a magic price-drop lever

Charmaine's commodity-vs-USA-Gummies framing assumes private label could deliver something close to her $0.19/oz target. **It cannot, because Powers doesn't make Albanese-grade commodity gummies.** Powers is a smaller batch confectioner with cleaner ingredient sourcing — that's exactly *why* we use them and why we can claim dye-free + made-in-USA. A private-label Buc-ee's branded gummy at Powers would have the same COGS structure as our branded SKU, plus setup costs.

The honest pitch to Charmaine on private label: "Yes, we can do a Buc-ee's-branded version. The economics are the same as our branded SKU because the cost is in the gummy, not the bag. The reason to do private label is if you want a **Texas-themed pack design + Buc-ee's UPC** for shelf differentiation — not to hit Albanese commodity pricing. We'd need a 25K+ bag commit to justify the custom film + plate setup."

5.3 What we'd need before quoting a private-label MOQ

- **Powers volume-tier pricing** (see §2.5 — Ben direct to Greg Kroetch).
- **Belmark custom-film plate quote** + per-roll cost at 25K, 50K, 100K bag commits. **Ben action (Belmark Link rep).**

- **Buc-ee's order velocity expectation.** A 50K-bag private-label commit is 1 truckload. Is that 6 weeks of velocity for Buc-ee's, 6 months, or 6 quarters? Charmaine has the data; we don't.
- **Net 60 vs Net 30 working-capital impact** at private-label volumes.

---

6. RECOMMENDED RESPONSE OPTIONS FOR CHARMAINE

> **All four options are STAGED FOR BEN'S APPROVAL.** No email gets sent until Ben (Class B `wholesale.proposal_response`) signs off in `#wholesale`. Per Ben's Slack thread 2026-04-30: "*No email going out to Charmaine until we have your read.*"

Option 1 — Premium-impulse re-pitch only

Frame: "We're not a commodity bulk-shelf SKU; we're an impulse $4.99–$5.99 strip-clip neighbor to Sour Patch Kids. The dye-free angle is meaningful in Texas given SB 25 (2027). Can we re-quote at master-carton + pallet scale for impulse placement?"

Pros: clean, defends our brand value, doesn't dilute by chasing private label. **Cons:** Charmaine already declined the brand pitch once. Re-pitching the same brand without a structural change risks a second, harder no.

Option 2 — Private-label scoping only

Frame: "Yes, we offer private-label co-packing at Powers Confections. Our COGS structure is the same — the value is in custom shelf identity + Texas-themed packaging + Buc-ee's UPC, not a commodity price point. Minimum commit ~25K bags. Want us to scope a quote?"

Pros: answers her direct question, opens a different conversation. **Cons:** doesn't address her pricing pushback. Locks us out of branded shelf if private-label conversation stalls.

Option 3 — Parallel pursuit (RECOMMENDED)

Frame: "Two paths — pick the one that fits your shelf strategy. (a) **Branded SKU re-pitched at premium-impulse positioning** — comp shelf is Sour Patch Kids 8oz, not Albanese 18oz. At $3.25 wholesale you're at 45.7% retail margin at $5.99 MSRP, with the only dye-free impulse SKU on your Texas shelves heading into TX SB 25's January 2027 effective date. (b) **Private-label co-pack at Powers Confections** — same gummy, your brand, your UPC, custom Texas-themed packaging. 25K+ bag minimum commit. We can scope economics if you tell us target velocity per store. Either path keeps you in front of TX SB 25 — every dye-using gummy on your Texas shelves needs the warning label by Jan 1, 2027."

Pros: answers her question, re-frames the pricing pushback, makes the regulatory tailwind explicit without overclaiming. **Cons:** longer email; needs careful regulatory-language review (see §3 — do NOT use Ben's original wording).

Option 4 — Close the loop with future reach-back

Frame: "Understood — appreciate the context on the H-E-B benchmark. We'll keep an eye on velocity at our existing premium-shelf accounts and circle back when we have data showing the impulse-strip economics work for a retailer at your scale."

Pros: clean exit, keeps door open, no risk of looking pushy. **Cons:** likely never re-engages; we lose the regulatory-tailwind window.

Recommendation: Option 3.

The regulatory-tailwind window is real (TX SB 25 effective ~8 months out from typical buyer planning cycles) and time-bounded — Albanese / Haribo will reformulate or relabel before then, and our differentiation narrows. Option 3 puts both paths on Charmaine's desk and lets her self-select. Option 2 alone wastes the brand work; Option 1 alone ignores her direct question; Option 4 is a graceful failure.

---

7. EMAIL DRAFT FOR BEN TO REVIEW (OPTION 3)

Subject: Re: USA Gummies — re-framing for Buc-ee's impulse-shelf strategy

> Hi Charmaine,
>
> Appreciate the candid pushback on the per-ounce math. You're right — at $0.43/oz we're not competitive with Albanese 18oz tubs at $0.19/oz, and we shouldn't pretend otherwise.
>
> I think we may have been evaluated against the wrong shelf neighbor, though. Two paths I'd love your read on:
>
> **1. Branded re-pitch at premium-impulse positioning.** Our comp set is Sour Patch Kids 8oz at ~$3.99 retail and Haribo Goldbears 8oz at ~$3.99, not bulk-shelf gummi bear tubs. At $3.25 wholesale and $5.99 MSRP, that's a 45.7% retail margin for Buc-ee's — which beats most impulse-candy targets. The differentiator is dye-free + made-in-USA (Spokane, WA), which lands directly into Texas SB 25's January 2027 effective date — every dye-using gummy on Buc-ee's Texas shelves will need the SB 25 warning label by then, ours won't.
>
> **2. Private-label co-pack at Powers Confections.** Yes, we offer it — same gummy, your brand, your UPC, custom packaging that could lean into a Texas-themed shelf identity. Our manufacturing cost structure is the same regardless of brand on the bag (the cost is in the gummy, not the label), so private label isn't a path to commodity pricing — it's a path to differentiated shelf identity at a meaningful retail margin. Typical minimum commit is around 25,000 bags to justify the custom film and plate setup. If you can share rough target velocity per store, we can scope a quote.
>
> Either path keeps Buc-ee's in front of SB 25's labeling requirement on the candy aisle. Happy to do a 20-minute call with you and our co-packer (Powers Confections, Spokane WA) if either path looks worth digging into.
>
> Thanks, Ben Stutman CEO, USA Gummies ben@usagummies.com · (307) 209-4928

Notes on this draft for Ben's review:

- Regulatory framing is per §3 — TX SB 25, NOT Ben's original "AB 418 bans Red 40" language. Verified facts only.
- "45.7% retail margin" math comes from §4.2 — assumes Buc-ee's hits $5.99 MSRP. If Buc-ee's typically prices our category at $4.99, that math drops to 34.9% — still in normal impulse-margin range but less compelling. **Ben to confirm Buc-ee's likely shelf price before sending.**
- 25K-bag MOQ on private-label is a placeholder pending Powers confirmation. **Ben action (direct to Greg Kroetch).** *Drew not in the loop.*
- Email is self-contained — no internal jargon, no `B3` / `C-ANCH` codes, no internal pricing-grid references.

---

8. OPEN ACTION ITEMS + OWNERSHIP

#	ACTION	OWNER	BLOCKS
1	Confirm Powers tier pricing at 25K / 50K / 100K commits (Ben direct to Greg Kroetch — Drew not active)	Ben	§2 + §5 final pricing
2	Confirm Belmark custom-film + plate one-time setup quote (Ben direct to Belmark Link rep)	Ben	§5 private-label MOQ

#	ACTION	OWNER	BLOCKS
3	LTL freight quotes Ashford WA → Houston / Dallas / SA TX DC zones at 1, 3, 6, 12, 24-pallet density	Ben (ShipStation pull)	§2 landed cost at scale
4	Confirm Buc-ee's typical retail price band for our category (likely $4.99 vs $5.99 vs higher)	Ben (ask Charmaine in re-engage email)	§4.2 retail margin math
5	Confirm Buc-ee's payment terms (Net 30 / Net 60 / Net 90)	Ben (ask Charmaine)	Working-capital line in proforma
6	Refresh `src/lib/ops/pro-forma.ts` from `cogsPerBag: 1.75` → `1.77`	Claude Code	Pro-forma channel-margins doc consistency
7	**Class B `wholesale.proposal_response` ratification** — Ben picks Option 1/2/3/4 + edits draft	Ben	All Charmaine outbound

9. CROSS-REFERENCES

- `/contracts/proforma-channel-margins.md` — per-channel GM framework, COGS = $1.77/bag locked.
- `/contracts/wholesale-pricing.md` v2.2 — B3 / B5 pricing referenced in §1, §2.
- `/contracts/proposals/pricing-grid-v2.3-route-reconciliation.md` — C-ANCH landed-anchor proposal referenced in §2.2, §2.3, §2.4.
- `/contracts/pricing-route-governance.md` §1 — landed route-anchor pricing economics.
- `/contracts/incident-2026-04-30-email-intel.md` — pattern this doc protects against (factually wrong claims in customer-facing copy).
- `/contracts/made-in-usa-substantiation.md` — Made-in-USA claim doctrine referenced in §4 + §7.
- `/CLAUDE.md` "Inventory & COGS Model" — $1.77/bag locked source.

VERSION HISTORY

- **0.1 — 2026-04-30** — First publication. Built in response to Charmaine Davis's 2026-04-30 decline + private-label question. Core deliverables: per-scale landed-cost framework, regulatory-fact correction (TX SB 25 not SB 1545; CA AB 418 + AB 2316 scope clarification), 4 response options for Ben, draft email for Option 3. Awaiting Class B `wholesale.proposal_response` ratification.
- **0.1.1 — 2026-04-30** — Removed all Drew action items (Drew not yet operationally active per Ben). Powers + Belmark asks reassigned to Ben direct.
